How does your probability of having a baby from IVF compare to intrauterine insemination (IUI) or trying naturally on your own?

The average probability that a couple with 3 years of infertility will conceive naturally per month of trying on their own: <3%.

The probability of having a baby from each IUI cycle is around 8% for women under 38 and 5% for women between 38 and 42. (Reindollar et al., 2010; Goldman et al., 2014)

† Here a cycle means an IVF cycle and any frozen embryo transfers using viable embryos from that IVF cycle. This probability accounts for IVF success from the use of all available viable embryos (fresh and/or frozen) resulting from each IVF cycle.

* If you are found to have poor oocyte or embryo quality in your first IVF cycle (e.g., resulting in one or no viable embryos of good quality), your cumulative live birth probabilities over 2 or 3 IVF cycles will be much lower.

Your Outlook

In a group of 100 women starting their first IVF treatment at our practice:

51 have success rates higher than yours

10 have success rates the same as yours

39 have success rates lower than yours

We analyzed your health data by using the IVF success prediction model that was developed and validated for Laurel Fertility Care based on Univfy's proprietary predictive technology.

Your Report Will Include:

- ✓ Your Health Data
- ✓ Your IVF History
- ✓ Your Clinical Diagnoses
- ✓ Clinical Factors That May Affect IVF Success
- ✓ and The IVF Program(s) That You Qualify For!!!

These options were designed to meet the different financial needs and concerns of our patients. The quality of your medical care will be the same and will not be affected by your choice of IVF purchase option.

Your Health Data

Please review your health data and see how your profile compares to profiles of other patients who received IVF treatment at Laurel Fertility Care.

AGE is calculated based on your date of birth.

BMI (Body Mass Index) is based on your height and weight.

FSH (Follicle Stimulating Hormone U/L) levels, on Day 3 of your menstrual cycle, indicate your ovarian reserve.

AMH (Anti-Mullerian Hormone ng/mL) levels reflect the size of the AMH remaining egg supply.

Your Reproductive History

NO. OF PREGNANCIES 0

NO. OF CLIN. PREG. LOSSES 0
